Hey

I have been playing with openVZ for a few months on a couple of okay PC's(256mb athlon \ 512mb 1.6ghz celeron) on domestic adsl connections. I have been offered a Sunfire V210 (2x UltraSPARC IIIi, 2 or 4 gb ram, 2x 37 Gb RaidM scsi. 8mb pipe.) in a datacentre in london so would like to attempt some more advanced virtualisation on it with a view to setting up a proof of concept. I understand there is some support for sparc but I have been unable to find any real data about how to get this working.

Get control of the computer monday, pre installed with debian 3.1 (minimal)

Cheers,

Andy
