shock wrote on Wed, 21 September 2005 03:06Hey,

I am trying to install you software but when i try to install vzpkg-2.7.0-17.noarch.rpm it does not work. it says it need vzyum

I thought it was my mistake, but I have just checked that vzpkg does NOT require vzyum. It requires yum though which is valid, so you need to install yum. The answer to the question "where to find yum" depends on the distribution you use, so if you tell me the distro I will tell you where to find yum.

Still, can you please post here the exact command you typed to install vzpkg rpm, and the exact output of this command (the error you mentioned).
