Subject: **\*SOLVED\*** ip\_conntrack\_ftp inside VE

---

Inside of a VE I have an application (Zope) which serves http and ftp.

Outside of the VE, I can make the ftp working by opening the corresponding port (8021) AND by loading ip\_conntrack\_ftp this way:

```
modprobe ip_conntrack_ftp ports=8021
```

How can I do that inside of a VE? I already have this line in the conf file of the VE:

```
IPTABLES="iptables_filter iptables_mangle ipt_limit ipt_multiport ipt_tos ipt_TOS ipt_REJECT  
ipt_TCPMSS ipt_tcpmss ipt_ttl ipt_LOG ipt_length ip_conntrack ip_conntrack_ftp ip_conntrack_irc  
ip_conntrack ipt_state ipt_helper iptables_nat ip_nat_ftp ip_nat_irc ipt_REDIRECT"
```

How can I give the VE the option "ports=8021"?

When i enter this manually, it doesn't work, so I assume it has to happen at VE start.
