Everything available on downloads w/o RPM as well.

Take this patch: <http://download.openvz.org/kernel/branches/2.6.18/028stab031.1/patches/patch-ovz028stab031.1-combined.gz>
and apply on mainstream 2.6.18 kernel downloaded from kernel.org from here:
[http://www.kernel.org/pub/linux/kernel/v2.6/linux-2.6.18.tar .bz2](http://www.kernel.org/pub/linux/kernel/v2.6/linux-2.6.18.tar.bz2)

the problem in config only
take your debian/ubuntu config, put it as .config and run:
make oldconfig

then select all OpenVZ options as described http://wiki.openvz.org/Kernel_configuration
