Hi, sorry, found my way out of that little maze This is my first kernel compile so please excuse me. I couldn't find an existing configure file that bore any resemblance to the .configure generated by make oldconfig command.

running make after make oldconfig with the options specified in
http://wiki.openvz.org/Kernel_configuration produced the following error.

```
kernel/cpt/cpt_context.c:134:2: error: #error Arch is not supported
make[2]: *** [kernel/cpt/cpt_context.o] Error 1
make[1]: *** [kernel/cpt] Error 2
make: *** [kernel] Error 2
```

Cheers,
