
Subject: [PATCH 1/13] Round up the API

Posted by [Pavel Emelianov](#) on Thu, 24 May 2007 12:35:20 GMT

[View Forum Message](#) <> [Reply to Message](#)

The set of functions `process_session`, `task_session`, `process_group` and `task_pgrp` is confusing, as the names can be mixed with each other when looking at the code for a long time.

The proposals are to

- * equip the functions that return the integer with `_nr` suffix to represent that fact,
- * and to make all functions work with task (not process) by making the common prefix of the same name.

For monotony the routines `signal_session()` and `set_signal_session()` are replaced with `task_session_nr()` and `set_task_session()`, especially since they are only used with the explicit task->signal dereference.

I've sent this before, but Andrew didn't include it, so I resend it as the part of this set.

Signed-off-by: Pavel Emelianov <xemul@openvz.org>

Acked-by: Serge E. Hallyn <serue@us.ibm.com>
