Subject: *SOLVED* Moving Hard Disk

Currently we have a server with a 80GB hard drive. However this is becoming full and and having a extra 160GB hard drive added.

Would moving over all the vps files over to the 160GB hard drive with a partition called "VZ2" work if we change the configs of the vps to tell the root dir of each vps is vz2/vzid/

Will there be any problems with the vps.

Or is it possible to have Openvz install new vps on the vz2 partition or can vps only be setup on one partition at a time?

Thanks
