Ahem, I know the reason vzuota should be dropped before start of VE after moving (you should do it only once):

```
# vzctl start 202
Starting VE ...
vzquota : (error) Quota on syscall for 202: No such file or directory
vzquota on failed [3]
# vzquota drop 202
# vzctl start 202
Starting VE ...
Initializing quota ...
VE is mounted
Setting CPU units: 1000
VE start in progress...
```

HTH,
Vasily.
