Subject: Re: Segmentation fault. Bug?
Posted by Vasily Tarasov on Fri, 25 May 2007 10:54:29 GMT

Thank you for the answer, but actually it isn't "Self-explanatory" for me! If there is no more space, all tools should handle this situation properly: without segmentation fault.

So I want to know is some OpenVZ tool (vzquota, vzctl, ...) or some usual Linux tool guilty. Can you, please, strace the script with `-f` flag please?

Thank you,
Vasily.
