Subject: *SOLVED* kernel support for PPP Posted by FiFtHeLeMeNt on Sat, 26 May 2007 09:51:42 GMT View Forum Message <> Reply to Message

Hello

I am going to setup a VPN server on my VPS ,so I installed ppp and pptpd on my VPS successfully , but seems the kernel of my VPS doesnt support PPP , so I couldnt make it work. when I try to strat pppd I get the following error :

the PPP kernel module could not be loaded, or because PPP was not included in the kernel configuration. If PPP was included as a module, try `/sbin/modprobe -v ppp'. If that fails, check that ppp.o exists in /lib/modules/`uname -r`/net. See README.linux file in the ppp distribution for more details.

I asked Admin of my network to enable it on my server , but seems he has had no luck doing it and he asked lxlabs support (they are using HYPERVM) and here is their answer :

http://forum.lxlabs.com/index.php?t=msg&th=1379&star t=0&

I will appreciate if you can help me about this matter. Best Regards
