Subject: *BUG REPORTED* support for grsecurity-patched kernels?

Hy all. Is there a possibility of official support for grsecurity (http://grsecurity.net) patched kerenls in openvz's patch? I'm usually manually modifying the patches to fit grsec based kernels, but sometimes I have kernel panics on the test system (eg.: when I turn on pax features). I'm pretty sure, that it is because I do semantic correction only on the patches to make it work with grsecurity enabled kernel.
