Hello,

As far as I remember on FC6 there is /etc/sysconfig/network file:

```
# cat /etc/sysconfig/network
```

```
NETWORKING=yes
```

```
NETWORKING_IPV6=no
```

```
HOSTNAME=localhost.localdomain
```

 You can use it to trigger ipv6.

However, this operation, certainly will not remove "inet6 addr: ..." line from ifconfig output. It is ok: IPv6 support is compiled in OVZ kernels, but interface will use the protocol (IPv4 or IPv6) which user wishes! So this line shouldn't worry you.

HTH,  
Vasily.
