Hello,

You can use usual Linux quota on HN on filesystem where OpenVZ Disk quota is not running. For example if you have separate partition mounted on /vz and all VEs private data is located in /vz/private/, then you can easily use Linux disk quota on root filesystem and on fs mounted on /home.

As I see, you're trying to make quota on on filesystem mounted on /home, so I guess OpenVZ disk quota is not running on this filesystem. Therefore you can use Linux quota there. The error asks you about quotacheck tool. Have you ran it?

Thanks,  
Vasily.
