If I understand correctly "VZ_DEV" can't be made a module...

Not fully true, when I deselect (no support) "Quota" under "File systems", VE device is available for selection as a module.

Since I'm using http://wiki.openvz.org/Installation_on_Debian#or_build_your_own_kernel-image_.28debian_way.29 Quota support should be selected ... I'm lost..
