---

i'm trying to upgrade a running ovz kernel-smp with the newest one from FTP and during install it complains there is no software raid1 extension built into the kernel. I hope i'm understanding the error properly:

Running Transaction

Installing: ovzkernel-smp ##### [1/1]  
WARNING: No module ata\_piix found for kernel 2.6.9-023stab043.2-smp, continuing anyway  
WARNING: No module raid1 found for kernel 2.6.9-023stab043.2-smp, continuing anyway

Installed: ovzkernel-smp.i686 0:2.6.9-023stab043.2

I am in fact, using both of these modules, ata\_piix and raid1. any ideas?
