Subject: Re: Failed Restart
Posted by Ashley on Mon, 04 Jun 2007 08:10:12 GMT

When ever i run the command vzctl restart or vzctl stop with a vps id number it restarts every single vps or stops every single vps.

This sometimes causes the server to Kernel Panic if the VPS have a high load, but normal this just causes every VPS to restart, even if i just run the command vzctl restart 102.
