Subject: Good Tutoral to set CONF files
Posted by mperkel on Tue, 05 Jun 2007 00:32:41 GMT

I read the install guides and there's so many settings that it makes my head spin. Does anyone have a link to some site that explains it in simple terms.

For example. I want to allocate a 512 mb server to be used for a caching DNS. What would be a good sample conf file for this setup.

And - is there any good utils to set this up?

Thanks in advance.
