This is definitely a bug in vzctl; thanks for catching this, and sorry for spotting this!

See bug #100; you can add yourself to Cc: for this bug to track its progress -- it should be fixed in the next vzctl release.

For now, you should change  
if [ -f \$VE\_CONFFILE ]; then  
to  
VE\_CONFFILE=/etc/sysconfig/vz-scripts/\${VEID}.conf  
if [ -f \$VE\_CONFFILE ]; then  
in both vps.mount and vps.umount scripts. I.e. you should add a single line (VE\_CONFFILE=...) to the both scripts.
