Hi Rick,

Thanks for getting back - appreciated.

- This is the "main" ve on the server. There will be 1 or 2 more, but they can all be tiny, memory-wise as they will run minimal stuff, and none are important.

- The HN has 2048Mb of RAM

- I am not sure if I understand the difference.

heh - yes, I come from a VMWare background, mainly, so a lot of this is more or less new to me.

Thanks

Martijn
