sspt wrote on Sat, 09 June 2007 14:20You can easily create a new metadata using an old one

Tale a look at
/vz/templates/$OS/

I actually looked through there before I posted. It seems to me that there are packages in vz-addons that depend specifically on the OS version (dummy-centos-4-1.0-3.swsoft). Aren't the two other packages (MAKEDEV and vzdev) also quite different for CentOS 5? I'm asking since I've read of some difficulties with devices in the /dev directory when using CentOS 5 VPSs.

If this is really this easy why hasn't SWSoft released it yet? I feel like I'm missing something here.
