Subject: Re: Are user beancounters available as separate patch?
Posted by rickb on Sun, 10 Jun 2007 02:38:47 GMT

Its an interesting idea for sure, but no one has such a patch. the user_beancounters file is a report of the kernel VE accounting structures of course, and to populate them you need all of the accounting functions in the kernel. Maybe someone could adapt the VE context to a system user, but this isn't likely to be on the openvz project roadmap.
