Hi,

I tried to install a G729 codec from Digium on my asterisk server that runs in a VE. It doesn't work because it needs a mac address to attach to.

Here is a suggestion from Digium:

I have asked around, and we have a possible solution that may work. I believe the g729 codec only requires a nic with the name eth0. Can you possibly try to take a virtual ethernet device on your openvz machine and alias it to eth0?

Is that possible?
