I'm using openvz kernel : 2.6.18-8.el5.028stab031.1PAE

and inside me VE I'm getting the following error when I hit:

```
ip6tables -L
```

```
ip6tables -L
```

```
FATAL: Could not load /lib/modules/2.6.18-8.el5.028stab031.1PAE/modules.dep: No  
such file or directory
```

```
ip6tables v1.3.6: can't initialize ip6tables table `filter': iptables who? (do  
you need to insmod?)
```

```
Perhaps ip6tables or your kernel needs to be upgraded.
```

But iptables work:

```
# iptables -L
```

```
Chain INPUT (policy ACCEPT)
```

```
target    prot opt source                destination
```

```
Chain FORWARD (policy ACCEPT)
```

```
target    prot opt source                destination
```

```
Chain OUTPUT (policy ACCEPT)
```

```
target    prot opt source                destination
```

Is this a known bug?
