Subject: Re: OpenVZ and bonding Posted by Andrey Mirkin on Thu, 14 Jun 2007 08:51:29 GMT View Forum Message <> Reply to Message

If you need VLANs in VE then you can do following:

- 1. Create veth device in VE
- 2. Create vlan device in VE based on veth device
- 3. Create bridge in VE0
- 4. Add veth pair device (in VE0) to bridge
- 5. Add eth0 device from VE0 to bridge

Now your VE will have VLAN and other VEs will not be able to see traffic from this VE.
