I was wondering if openvz avoids context switching when delivering network packets to a VE.
Seems like this is an issue with xen. Some interesting references:

http://www.dcs.gla.ac.uk/~ross/reports/hpsr2006_router_virtualisation.pdf

http://www.usenix.org/events/usenix06/tech/menon/menon_html/paper.html

Any comment from the openvz developers?
