---

I was wondering if openvz avoids context switching when delivering network packets to a VE.  
Seems like this is an issue with xen. Some interesting references:

[http://www.dcs.gla.ac.uk/~ross/reports/hpsr2006\\_router\\_virtualisation.pdf](http://www.dcs.gla.ac.uk/~ross/reports/hpsr2006_router_virtualisation.pdf)

[http://www.usenix.org/events/usenix06/tech/menon/menon\\_html/paper.html](http://www.usenix.org/events/usenix06/tech/menon/menon_html/paper.html)

Any comment from the openvz developers?
