OK, the problem was bad interoperability of newer kernels and older vzctl which is fixed in vzctl git but not yet released.

Here's the fix:
 http://git.openvz.org/?p=vzctl;a=commitdiff;h=4766d1f711a73e 7929530a5a3f50d749e0f9de6a

If anybody else is having the same problem, there are a few options:
1. Wait for vzctl-3.0.17 to be released (I hope it will happen this week or so).
2. Use latest vzctl from git repo.
3. Rebuild vzctl-3.0.16 with the above patch applied (most conservative approach).
