Hi Gregor,

> The vznetaddroute script checks the VE's conf file for the NETIF line,  
> which should be very similar to this except for the MACS:  
>  
NETIF=" ifname=eth0,mac=00:18:51:D2:F4:A5,host\_ifname=veth12.0,host\_ mac=0  
0:  
> 18:51:1F:70:28"

Thanks - it gives me a sense, I did not find NETIF syntax in vzctl man  
so it was little bit confusing for me.

> The VZHOSTIF is the device name given as host\_ifname in that string,  
> see? In this case, veth12.0 Personally, I've found it a very handy  
> practice to always keep the ifname the same as the VEID, e.g. veth1.0  
> for VE 1, veth72.0 for VE 72, and so on. But that's up to you.

Great, now I am sure what kind of interface it is. After few hours of  
testing I am little bit confused resolving between VE0, VHOST, VE, VPS  
etc. :-)

Many thanks for making me clear, I think in debian it will be the  
same...I hope it'll work.

Bye
