Swapnilm, I've send a PM to milind yesterday about possible workarounds. Here is the content of the message:

Hello, I've found the reason of the problem! Wink

Milind, you discoverd rather serious bug in 2.6.9-based kernels, thank you very much! It is not hard to fix it, I will do it today/tomorrow. I also will create a bug report and post a link to it to your initial post at support forum.

You can now remove admin/supp0rt login from your node.

After the patch will be sent some time will pass before the fresh kernel will be released. So, you have several opportunities:

- 1) Wait till the fresh kernel will be realeased
- 2) Compile kernel with the patch by you self
- 3) Just move to 028stab035 kernel, that has no such problem.

Thank you once again,
Vasily.

I think the path will be available today. Bug report link:
http://bugzilla.openvz.org/show_bug.cgi?id=632

Vasily.
