Subject: *SOLVED* vps's directory on different hard disk
Posted by onyx on Fri, 22 Jun 2007 07:46:52 GMT

Hi!

Is it possible, to have a VPS's directory on a different device, than /vz? For example I have two 140G hard drives, in raid1, and on top of that I have LVM, for the ability to have snapshots, and this is mounted az /vz. I'd like to have /vz/private/101/var to be on another device. Can I do that?

Thanks in advance!
Balint
