I am able to create VEs properly with LiveCD but get ioctl errors when the same liveCD is installed on a hard disk.

Errors reported

Creating VE private area (fedora-core-5-i386-minimal)

vzquota : (error) Quota getstat syscall for id 220: Inappropriate ioctl for device

vzquota init failed [3]

vzquota : (error) Can't open quota file for id 220, maybe you need to reinitialize quota: No such file or directory

vzquota : (error) Quota getstat syscall for id 220: Inappropriate ioctl for device

vzquota init failed [3]

vzquota on failed [61]

vzquota : (error) Can't open quota file for id 220, maybe you need to reinitialize quota: No such file or directory

vzquota off failed [11]

vzquota : (error) Can't open quota file for id 220, maybe you need to reinitialize quota: No such file or directory

vzquota setlimit failed [11]

Performing postcreate actions

VE private area was created

I think similar problems were reported with newly built kernels but I am puzzled as to why a HD install from the liveCD should behave this way. There was some install error that flashed by when installing from the liveCD but it did not seem to affect the install.
