/proc/version

```
-----  
Linux version 2.6.18-028stab027 (root@white.sw.ru) (gcc version 4.1.2 20061115 (prerelease)  
(Debian 4.1.1-21)) #4  
SMP Wed Apr 18 11:12:46 UTC 2007  
-----
```

lsmosd shows the following vzmodules installed
(I apologize for not adding the lsmosd output but I am running
inside QEMU, so cut/paste is not working and net is not up yet.
And copying the entire lsmosd output by hand is a trifle painful !
liveCD without HDD install was also run inside QEMU.)

```
vznetdev  
vzethdev  
vzrst  
vzcpt  
vzmon  
vzdev  
but vzdquota is missing in the HDD install
```

Let me know if need to look for any specific modules

Stack trace

```
-----  
strace is a little too large (to transcribe manually) but I get some idea of what went wrong
```

All the libvzctl libraries are missing in the HDD install.

In the CD install they are present in /usr/lib
(.la,.so,0.0.2.so)

In both cases looks like the vzctl utility searches for the libvzctl in quite a few locations.

there are some other files that both versions report as
not found in the stack trace but since those errors are
common I guess they do not matter.

Does this help or do you need the full trace ?

Thanks
