---

/proc/version

-----

Linux version 2.6.18-028stab027 (root@white.sw.ru) (gcc version 4.1.2 20061115 (prerelease)

(Debian 4.1.1-21)) #4

SMP Wed Apr 18 11:12:46 UTC 2007

-----

lsmosd shows the following vzmodules installed

(I apologize for not adding the lsmosd output but I am running inside QEMU, so cut/paste is not working and net is not up yet.

And copying the entire lsmosd output by hand is a trifle painful !

liveCD without HDD install was also run inside QEMU.)

vznetdev

vzethdev

vzrst

vzcpt

vzmon

vzdev

but vzquota is missing in the HDD install

Let me know if need to look for any specific modules

Stack trace

-----

strace is a little too large (to transcribe manually) but I get some idea of what went wrong

All the libvzctl libraries are missing in the HDD install.

In the CD install they are present in /usr/lib

(.la,.so,0.0.2.so )

In both cases looks like the vzctl utility searches for the libvzctl in quite a few locations.

there are some other files that both versions report as not found in the stack trace but since those errors are common I guess they do not matter.

Does this help or do you need the full trace ?

Thanks
