Hello, Ugo.

just a small question - did you try to use venet and just configure node as simple as you did on your Xen node?
i mean just set a private IP on a Hardware Node (eth0) and set a public IP for a VE? (vzctl set $VEID --ipadd $PUBLIC_IP --save)

i just checked such a simple configuration and it seems to me - it works fine.
Could you please check it? If it won't work, could you please post
- ip a l
- ip r l
- vzctl exec $VEID ip a l
- vzctl exec $VEID ip r l
- the command that didn't work?
