Hello, Ugo.

just a small question - did you try to use venet and just configure node as simple as you did on your Xen node?

i mean just set a private IP on a Hardware Node (eth0) and set a public IP for a VE? (vzctl set \$VEID --ipadd \$PUBLIC_IP --save)

i just checked such a simple configuration and it seems to me - it works fine.

Could you please check it? If it won't work, could you please post

- ip a l
 - ip r l
 - vzctl exec \$VEID ip a l
 - vzctl exec \$VEID ip r l
 - the command that didn't work?
-
