Hi, I am using a kernel from deb <http://download.openvz.org/debian> etch main

Linux argo 2.6.18-028stab033.1-ovz-smp #1 SMP Thu May 31 04:17:27 CEST 2007 i686 GNU/Linux

```
argo$ sudo vzctl --version
vzctl version 3.0.11
```

I've setup an openvz VE (running Debian Unstable) like so:  
<http://faq.databse.com/faqw.py?req=show&file=faq01.152.ht p>

And I am quite happy with it. Except I have experiencing some odd slow network behaviour, which I am having trouble debugging.

I first noticed it when my apt-get upgrades hung (timed out).

Now I've been noticing for an application in the VE to connect to a remote mysql DB.

monty is my laptop in the UK  
simon is the VE  
argo is the host

<http://pastebin.com/940574>

You can see that simon seems to take consistently almost 30 secs to get a couple of records from the DB. Any ideas why?

I have tried stopping and starting simon. I suspected DNS troubles at first, though simon to be able to look up stuff as fast as argo.

Kind regards,

```
simon:~% sudo /sbin/ifconfig
