Subject: Multicast between VEs

Hi,

i have a question regarding multicast (i am new to multicast):

I use the following commands to test multicast:
iperf -s -B 224.0.66.66 -u (server)
iperf -c 224.0.66.66 -u (client)

It only works within the same VE.
It does not work between different VEs.
It does not work with a HN.
It does not work between HN / VE (and other way around).
It does not work between different HNs.

Any ideas what to test?

This is a debian box with custom kernel config (2.6.18-028stab035-1-openvz).

Thanks,
Ataraxis
