Stuart,

it looks like you are using NFS inside VE,

so kthreads should be allowed via:

```
# echo 1 > /proc/sys/kernel/ve_allow_kthreads
```

and these call traces will go away.

If you experience a lockup again, please press Alt-SysRq-P multiple times
and Alt-SysRq-T and provide the output
(it can be collected e.g. via net or serial console)

Thanks,

Kirill
