Subject: *SOLVED* HN NAT Security
Posted by aar365 on Sat, 07 Jul 2007 02:48:31 GMT

Hi All,

can you suggest some security measures on the Hardware Node, which enabled NAT?

OS: CentOS 5
Kernel: 2.6.18-8.1.4.el5.028stab035.1
NAT: forward HN port 80 to Internal VE

Seems the default firewall was removed after NAT setup. What should I do to secure the HN? Is it safe enough?

Thanks for help in advance!
