Hi All, I was wondering if there's a command where I can start or stop a VPS based on there status. For Example:

- Only start all VPS that have status "stop".
- Stop all VPS with status "running" or "started"...

I would like to see other similar type commands that would take effect on multiple VPSs. If there already exist those type of commands I'd appreciate a link to the resource to read up on it!

Thanks - Joe
