
Subject: ***SOLVED*** Compression while migrating?

Hello everybody. I'd like to migrate machines remotely. The matter is that I haven't a so fast connection. While it should be enough for a migration, it would be nice if datas could go compressed. I use rsync with compression enabled but I don't think that vzmigrate does it. Is there any way to do it?
I've tried to pass "-C" to ssh but I don't think it gets used.
