Hi,

I would like to know if it would be possible to use ipt_mport and ipt_iplimit inside a VPS or from the node server. Currently I have servers with CentOS 4 and kernel 2.6.18 and 2.6.9 and on none of these I'm able to use either one of the modules mentioned above from the HN nor from inside any VPS. Is there a way to have those modules added to the kernel?

Regards,

Eugenio Pacheco
