Ok, now I know, what's the problem.

Look at the bug report: http://bugzilla.openvz.org/show_bug.cgi?id=552

This is your case. Your VE uses inotify and can't be checkpointed on 028stab031 kernel. Please, update till the recent kernel and try the online migration there.

You wrote, the you "could not make any VE migrate with the 035". Why? What was the output of vzmigrate?

Thanks,
Vasily.
