
Subject: *SOLVED* getting rid of venet0 - just physical interfaces

Hi,

I've successfully added my hosts eth1 to my (only) vps with --netdev_add.

By removing the IP_ADDRESS line in the vps config file, I also got rid of venet0:0 - now how do I get rid of venet0 both on the host and the vps?

I don't want/need the interface at all, because I don't want the connection between the physical and the virtual machine (even though the interface is down).

Any hints on how to do this?

Regards,

Mephisto
