Ok.. I'm doing something really wrong. I figured I probably accidentally skipped through the man, but I've read a few times and can't figure it out.

I've created a VE no problem, but I have no idea how to add a gateway. I can add the IP, and nameservers no problem using `vzctl set VEID`, but there is no option for the gateway?

I don't want the host node to be the gateway I want my regular gateway IP on the router to be assigned to each VE. How do I add it to the VE?

Thanks
