Subject: *SOLVED* Centos 4 or 5 for HN?
Posted by ugob on Mon, 16 Jul 2007 03:10:01 GMT

Hi, I have 2 servers that are already Centos 4/OpenVZ. I'm about to put them in a datacenter. I have another server, which is CentOS 5 (my friend installed this one). I'm wondering if I should keep Centos 5 on this one or keep centos4. I haven't tried 5 at all yet, but I want to make sure I don't have to re-install the HN in something like 1 year... Is OpenVZ planned to be supported on Centos4 as a HN for a long time? Is there a clear advantage about installing Centos5?

Thanks,

Ugo
