Hello, you can try to set sysctl's net.ipv4.tcp_max_orphans variable to a higher value. Also, check /proc/user_beancounters on failcounters.

BTW, what kernel version do you use?

As concerns increasing swap. Actually I think it isn't OpenVZ related question - it is a common problem for Linux Servers. So, probably you can find the answer on other sites/forums in Internet.

HTH,
Vasily.
