
Subject: Disable module support in kernel

Hello,

I've tried to install openvz-kernel 2.6.8-022.064.1.

In my .config, module support is disabled. If I'm trying to compile my kernel, compiling is aborted with an error message (have a look at http://bugzilla.openvz.org/show_bug.cgi?id=96).

If module support is enabled, everything works fine.

Is any patch available, to compile the kernel with module support disabled?

TIA,
Steffen
