Subject: Re: Quota Issue New VPS
Posted by dev on Fri, 20 Jul 2007 07:08:02 GMT

it looks like something goes really wrong on your server.

1. check disk space available in the system with `df -h`

2. looks like your defaults for inode diskquota in /etc/vz/conf/vps-basic.sample are wrong, since inode soft limit should always be smaller then hardlimit (it is stored in sample config as DISKINODES="200000:220000", in your case it looks like it is =2000000:220000, which is wrong.

3. check that VE template /vz/template/cache/centos-4-i386-default.tar.gz archive is not broken. just unpack it somewhere with commands like:
tar vzxf /vz/template/cache/centos-4-i386-default.tar.gz
echo $?
and check that no errors occured. Maybe you have to redownload it from openvz.org
