1. Please update vzctl till the most recent version. 3.0.14 has a bug: it can sometimes garbage the conf file.

2. Can you post output of the following commands:

```
# ls -l /vz/  
# ls -l /vz/private  
# ls -l /vz/root  
# cat /etc/vz/conf/510.mount  
# cat /etc/vz/conf/510.umount
```

3. Can you give an access to the node?

Thanks,
Vasily.
